Prescription Safety Glasses Policy

Employees who wear prescription lenses while engaged in work operations that involve eye injury potential must wear prescription safety glasses with side shields or safety goggles that fit over the prescription glasses. All safety glasses must meet ANSI Z87.1 and CSA Standard Z94.3-07 requirements and be marked as such. Employees will be eligible for prescription safety eyewear once every two years. Damaged eyewear or replacements will be handled on an individual basis with the employee's supervisor/manager. Employees requesting prescription safety glasses must obtain an optical prescription from their optometrist. A link to the internet site to order the prescription safety glasses can be obtained from the employee's local office manager or safety manager.
